

Product description

The Influencer contract is a contract which is valid until further notice and in which the product price consists of three components: basic charge (€/month), energy fee (c/kWh) and own influence (c/kWh). The electricity is verified with guarantees of origin proving that it is produced with CO₂-emission-free energy sources.

Pricing

The monthly customer price of the Influencer contract is calculated as follows:

$$\text{Customer price} = (\text{EF} + \text{O}) * \text{E} + \text{BC}, \text{ in which}$$

EF = Energy fee (c/kWh)

O = Own influence, which may be either positive or negative (c/kWh)

E = Energy consumption during the month (kWh)

BC = Basic charge (€/month)

Own influence (c/kWh) is based on the customer's electricity consumption (kWh) per Price period and the prices (c/kWh) of exchange electricity in Nord Pool's bidding area for Finland. **"Price period"** refers to the period for determining the spot price of electricity on the Nord Pool energy exchange. If the spot price determination interval on the Nord Pool energy exchange changes, the contract's Price period will be updated accordingly. If the metering period at the place of use is different from the valid Price period, the customer's consumption data will be adjusted to periods that match the current Price period.

Own influence is calculated per calendar month. If the contract begins or ends in the middle of a calendar month, the calendar month in question is used as the period for calculating Own influence to the extent the contract has been valid during that calendar month.

Own influence is calculated as follows:

$$\text{Own influence (O)} = \text{MV} / \text{E} - \text{A}, \text{ in which}$$

MV = Market value of the electricity consumed, calculated by multiplying the electricity consumption (kWh) of each Price period of the month with the exchange electricity price per Price period (c/kWh), and then adding these together.

E = Energy consumption during the month (kWh)

A = Average of the month's exchange electricity prices (average price) (c/kWh)

VAT is added to the monthly Own influence (c/kWh).

Own influence can be negative, meaning that the customer's final electricity price becomes lower, or positive, resulting in a higher price. Consumption (kWh) during Price periods when the exchange electricity's price is lower than the month's average price results in a lower price. Consumption (kWh) during Price periods when the exchange electricity's price is higher than the month's average price results in a higher price.

The sum of the Energy fee and Own influence unit prices (c/kWh) cannot be negative.

Actual prices for Price periods are shown on the Nord Pool Spot website. In addition, prices and consumption information are available to the customer in Vaasan Sähkö's digital customer services.

Vaasan Sähkö has the right to revise the basic charge by notifying the customer one month before the change takes effect.

Quarterly prices and final invoice price

The energy fee (EF) of the Influencer product follows the market price and is set four times a year. The quarterly price periods are 1 January to 31 March, 1 April to 30 June, 1 July to 30 September and 1 October to 31 December. For each three-month period, we send a price notification no later than one month before the beginning of the period.

Applicable terms and conditions

In addition to these product-specific terms and conditions, the Terms of Electricity Sales recommended by Finnish Energy, available at vaasansahko.fi/terms, and the general price list of Vaasan Sähkö are applied to this contract.
